## Properties of UPVC Pipes

### Mechanical

Tensile Strength	:	415 - 525 Kg/cm <sup>2</sup>
Compression Strength	:	550 - 910 Kg/cm <sup>2</sup>
Flexural Strength	:	680 - 1100 Kg/cm <sup>2</sup>
Izod Impact Strength	:	4 - 5 Kg/cm <sup>2</sup>
Shore Hardness	:	D 65 - 85

### Thermal

Co-efficient of Linear Expansion:	0.08 mm/M°C
Vicat Softening Temperature	>78°C
Max. Operating Temperature	60°C

## Standards, Quality Control and Testing

The manufacturing and testing is done for pipes in accordance with IS: 4985  
All the above pipes, except non-pressure pipes are tested for potable water supplies in accordance with their relevant standards and as per the test methods given in IS: 12235

## Hazen - William's Flow Co-efficient Comparison

Pipe Material	PVC	A. C.	G. I.	C. I.
Flow Co-efficient	150	130	110	100

## Pressure Rating vs Temperature Derating Factor

Temp Deg (C )	Derating factor
0-25	1
27	0.95
30	0.89
35	0.79
40	0.71
45	0.63
50	0.42
55	0.34
60	0.25

As the temperature of fluid flowing through installation increases, the pressure withstanding capacity of installation wall decreases. So to find out the pressure rating of PVC Pipes & Fittings at required temperature, multiply, the pressure rating of Pipes & Fittings by derating factor given in table.

### Example:

Rated pressure of installed system 10 Kg,  
Up to 25°C, the system can stand 10 Kg pressure,  
If Temperature is 40°C, derating factor is 0.71,  
Therefore  $10 \times 0.71 = 7.1$  Kg.  
So, the system can withstand 7.1 Kg.

Pipes as per  
IS 12818

## Overview

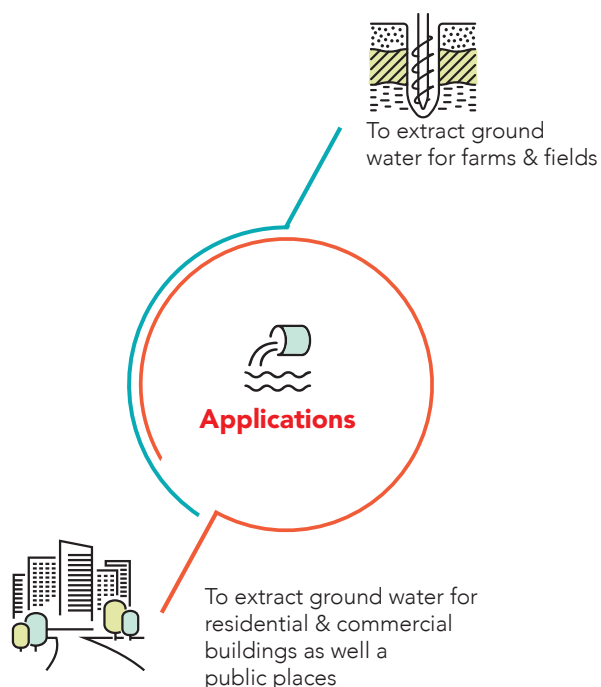

Designed to be used in borewell applications, these piping systems are made from a high-quality PVC compound that ensures they have high tensile strength, can withstand high impact and have minimum water friction. What makes them even more unique is the CIRCLIP locking system designed specially to withstand pressure during underground water extraction.
